Response to Arguments

1. Applicant's arguments filed on March 11, 2002 have been fully considered to be persuasive. Therefore, the FINAL rejection of claims 1-21 and 26 set forth on October 26, 2001, paper # 11, has been withdrawn.

A new non-FINAL rejection has been set forth as below:

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-21 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jenekhe, 5,814,833, in view of Warner et al., 5,591,530, and Traynor, 4,629,798.

Jenekhe, 5,814,833, discloses in Fig. 8 an electronic device comprising:
electrodes 5 and 7;
conductive polymeric film 2 (see lines 17-19, column 49) including: electron withdrawing group (see lines 22, column 2) from cyano, nitro groups

(see lines 51-52, column 7); aryl, phenyl, ethyl and biphenyl groups (see line 18 and 32-33, column 7); phosphine (see lines 25 and 53, column 53); binding groups oxygen, sulfur atoms (see lines 33-34, column 5).

What is not shown in Jenekhe, 5,814,833, is the monolayer as recited in claim 1.

Warner et al., 5,591,530, discloses in Fig. 1 the use of monolayer optical polymeric film 13 (see lines 31-67, column 3 and lines 1-19, column 4).

It would have been obvious under 35 USC 103(a) to one of ordinary skill in the art at the time of the invention was made to utilize the monolayer optical polymeric film 13 in Fig. 1 of Warner et al., 5,591,530, for the polymeric film 2 in Fig. 8 of Jenekhe, 5,814,833, for the purpose of having dimensionally stable, flexible and optical uniform (see lines 61-63, column 3 of Warner et al., 5,591,530).

What is not shown in Jenekhe, 5,814,833, which is modified by Warner et al., 5,591,530, is the palladium electrode as recited in claim 21.

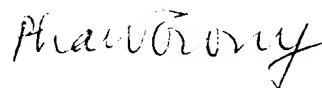

Traynor, 4,629,798, discloses the teaching of using palladium electrode in an electronic device having conductive polymer (see lines 42-43, column 12).

It would have been obvious under 35 USC 103(a) to one of ordinary skill in the art at the time of the invention was made to utilize the palladium electrode of

Art Unit: 2818

Traynor, 4,629,798, for the electrodes 5 and 7 of Jenekhe, 5,814,833, which is modified by Warner et al., 5,591,530, for the purpose of design choice.
